3 Surefire Signs

3 Surefire Signs Your IT Company Is Failing To Protect You From Ransomware

**NEW And Critical Changes To
Cybersecurity, Insurance Coverage And Threats
That Will Put Your Business At Serious Risk
If Not Addressed Immediately**

Discover what the vast majority of businesses don't know and haven't been told about changes to cybersecurity risks, insurance requirements and threats that are allowing them to operate at UNDERAPPRECIATED RISK for a crippling cyberattack and subsequent costs, lawsuits and fines – and what to do about it now.

About The Author

ItCon's success as a leading IT and Cybersecurity company is driven by Leah Freiman's passion for helping people. Before Leah founded ItCon, she worked as a mortgage broker and taught music on the side. Her love of helping others played itself out in both jobs. As a mortgage broker, Leah took clients with bad credit and debt and helped them get loans with low taxes and closing costs. As a music teacher, she used her skills to help 'special' children expand their capabilities and find joy in music.

On a professional level, her passion is to help companies thrive by overcoming issues that could undermine all their best efforts to succeed. In working closely with the clients of the computer repair company she formed with her husband, the destructive power of cybercrime became dramatically and drastically evident. More and more companies around the globe were falling prey to aggressive cyber attacks. The financial damage and loss of business were insufferable. Leah Freiman applied her energy, drive, and focus on creating a company that would provide clients with all-encompassing tools and tactics needed to secure the future for numerous clients successfully.

Leah Freiman is a recognized expert in the cybersecurity industry. She provides cybersecurity training for many large organizations, has been called upon to deliver a presentation to the NYSii in Albany, has lectured at Touro College, and is the founder of ITCON2019, the Premier Cybersecurity Conference for Business Owners. **ItCon has been awarded numerous awards in the last few years. ItCon received Global Infosec award of 2021, Inc5000 in 2021 and 2022, MSP500 in 2021 and 2022, MSP501 in 2021 and 2022, MSSPAlert top 250 MSSP's in 2020 and 2021 and the KnowBE4 LemonShark award of 2021!** Leah starred in the movie Cyber Crime, a documentary film that explores the world of cybercrime and how you can avoid becoming a victim. She is also the author of "Double Your Revenue with the Right Technology," an Amazon bestseller that teaches business owners how technology can help them grow rather than add business expense.

ItCon represents her passion for creating awareness and providing solutions for companies looking to grow their business with the right technology and fighting cybercrime activities.

The Truth Nobody Is Telling You About IT Security

All of the hard work, investments and time you've put into growing your business is at HIGH risk due to the false information and half-truths you've been told by cybersecurity experts, IT companies and even your insurance provider.

You *think* your IT company or person has your network protected. You *think* you're doing everything right (or at least well enough). You *think* your insurance company will cover your losses and expenses if a breach occurs. You *think* your staff is being smart and not putting you at risk because you're already paying for security tools. You think your bank, credit card processing company or software vendor assumes all the risk for the payments you take and for credit card processing. And you think that because you're small, nobody wants to target you.

Worst of all, you think a data breach would be a minor inconvenience with very few negative effects or costs. And two years ago, you might have been right...

But today, ALL of these assumptions are wildly inaccurate – and if you're still operating on any of them, you are putting everything you've worked so hard to earn at risk of serious financial damages with far-reaching negative implications. Consider this report as your wake-up call.

There have been significant changes over the last few years in cyberattacks, what insurance will cover (and what's necessary to make sure your claim is not denied) and IT protections. The plan you put in place a year or two ago to deal with all of this is no longer viable.

We can practically guarantee that what you've been told about keeping your business secure from hackers is either wildly inaccurate or insufficient and incomplete, putting you in a situation of underappreciated risk, and when a breach happens, those who sold you their secure solution will be nowhere to be found, accepting no responsibility, **leaving you to face it all on your own and paying out of your pocket.**

You don't want to be blindsided by a breach and then discover how much this can negatively impact you, then say, "Why wasn't I told THAT?"

To be clear, this is not just about keeping your data secure. This is about making sure you completely understand the risks associated with a cyberattack, IT failure or employee mistake and the costs, consequences and damage to your business that will result.

please visit **www.ItConInc.com**
or call our office at 845.738.1661

That's why I wrote this report. Over the last few years, we've discovered that ZERO of the businesses we've assessed before becoming clients are even close to being prepared for a cybersecurity incident.

Not a single one.

All of them were operating under the incorrect assumption that they were "secure enough," and they grossly underestimated the costs and wide-reaching negative impact a breach would have. Their trusted team of "experts," who are supposed to be informing them and protecting them, are FAILING to do their job. You are very likely in the same situation.

This means if you were to experience a breach (and it's getting more and more likely you will), your staff would instantly be hit with a crushing workload of cleanup to recover from the breach and they'd have to deal with the auditors, the FBI and the attorneys who will overwhelm them with things they demand. You would also be financially devastated by the destruction, as well as the emergency IT services and legal fees and services you would be forced to pay for just to get back up and running. **Worse yet, there is a very good chance your insurance claim could be denied or not fully paid out due to your failure to do the things we've outlined in this report.**

This is NOT a subject you want to take lightly or "assume" you have handled. Your cybersecurity program should NOT be entirely abdicated to your IT director, IT department or company. It should not be assumed that because you are investing tens of thousands of dollars in cybersecurity that you are actually protected from a cyberattack. YOU need to get the facts about what it means to be secure and make choices about what risks, if any, you are willing to take, because it will be your company's reputation at stake and your financial responsibility should a breach happen. Bottom line, small and mid-sized businesses are the #1 target for cyber criminals for reasons we'll discuss in this report – and you have almost certainly NOT been given a plan that is 1) complete, 2) practical, and 3) affordable. Your parachute is full of holes, and you are completely without a backup chute that will deploy.

QUESTION:

***When was the last time your current IT company had THIS conversation with you?
What HAVE they told you about these new threats?
If they have been silent, then I would urge you to read this report in full
and act on the information urgently.***

“Hackers Won't Break Into My Business... We're Too Small. My Staff Is Too Smart. We're Good,” You Say?

Don't think you're in danger because you're a “small” business and don't have anything a hacker would want? That you have “good” people who know better than to click on a bad e-mail or make a mistake? That it won't happen to you?

That's EXACTLY what cybercriminals are counting on you to believe.

It makes you *easy* prey because you put ZERO protections in place, or simply inadequate ones. In fact, SMALL organizations like yours are the target because you're infinitely easier to compromise. Hackers are unethical, but *not* stupid.

You have a twist tie locking the gate to a veritable goldmine of prize data that can be sold for millions of dollars on the dark web. Let's be clear: You are dealing with highly sophisticated cyber criminals who can outsmart – and have outsmarted – extremely competent IT teams working for large organizations and government entities. You and your staff are NOT above making a mistake or being duped. Further, most of the businesses that get breached are not “handpicked” by hackers – that's not how they operate. They run grand-scale operations using automated software that works 24/7/365 to scan the web and indiscriminately target as many victims as they can. Like commercial fishing boats, they cast wide nets and set baited traps – and yes, small medical practices DO get targeted and DO get breached every day – **and the attacks are escalating.**

Make no mistake – small, “average” businesses are being compromised daily, and clinging to the smug ignorance of “That won't happen to me” is an absolutely surefire way to leave yourself wide-open to these attacks.

Are you 100% sure you're “too small” to deal with a hacker who exposes your sensitive data? Are you “too small” to worry about paying the ransoms and costs that you will incur? According to Osterman Research, the AVERAGE ransomware demand is now \$84,000 (source: MSSP Alert) – and that does not include fines, lawsuits, emergency IT services or lost business.

or call our office at 845.738.1661

You may think to yourself, “I will just go out of business. I could just start over.” Here’s the thing: the hackers often figure out exactly how much money you have so they can make sure to ask for just enough that you will pay it rather than go out of business. They also leave back doors so they can pop back in and “harvest” your network again in a couple of years when you recover.

How Bad Can It Be? My Insurance Will Cover Me, Won't It?

Insurance companies are in the business to make money, NOT pay out policy claims.

A few years ago, cyber insurance carriers were keeping 70% of premiums as profit and only paying out 30% in claims. Fast-forward to today, and those figures are turned upside-down, causing carriers to make drastic changes in how cyber liability insurance is acquired and how coverages are paid.

For starters, getting even a basic cyber liability policy today may require you to attest that you have certain security measures in place, such as multifactor authentication, password management, endpoint protection, third-party penetration testing and tested data backup solutions. These carriers want to see phishing training and cybersecurity awareness training in place, and some will want to see a WISP and/or a Business Continuity Plan from your organization. Depending on the carrier, your specific situation and the coverage you’re seeking, the list can be even longer.

But the biggest area of RISK that is likely being overlooked in your company is the actual enforcement of critical security protocols required for insurance coverage. Insurance carriers can (and will) deny payment of your claim if you failed to actually implement the security measures required to secure coverage. When a breach happens, they will investigate how it happened and whether or not you were negligent before paying out.

You cannot say as a defense, “I thought my IT company was doing this!” Your IT company will argue that they were not involved in the procurement of the policy and did not warranty your security (none will; check out your contract with them). They might show evidence of you refusing to purchase advanced security services from them to further distance them from any responsibility. And if you haven’t been documenting the steps you’ve taken to secure sensitive information to prove that you were not “willfully negligent,” **this gigantic, expensive nightmare will land squarely on your shoulders to pay.**

Exactly How Can Your Business Be Damaged By Cybercrime?

Let Us Count The Ways:

1. Loss Of Clients And Revenue:

If you are breached, you will be forced to notify your clients and employees that you exposed their private information to hackers. Do you think all your clients will rally around you? Offer sympathy? News like this travels fast on social media. They will demand answers: **HAVE YOU BEEN RESPONSIBLE** in putting in place the protections outlined in this report, or will you have to tell them, “Sorry, we exposed your sensitive information and financial data to criminals because we didn’t think it would happen to us,” or “We didn’t want to invest in protecting your data because we’re small.” That will not be sufficient to pacify them and the trust you’ve worked so hard to build will be destroyed. It’s true that some of your clients, employees and business associates will be understanding. Some won’t even care. But you can bet there will be a small percentage of your clients or employees who become irate and maybe even report you to the local news – and it only takes ONE lawsuit to make your life miserable. Worst case, they find an attorney who will take their case for invasion of privacy. Even if they don’t have a case and cannot prove damages, do you really need that headache? At the very least, they will cancel their contracts with you and be sure to tell their friends and family how you put their personal, business and financial data at risk of exposure to criminals. Let’s say it’s only 20% – can you really afford to lose 20% of your clients overnight, along with their friends and family members who are (or could be) potential clients?

2. Legal Fees And Lawsuits:

When a breach happens, you will incur emergency IT support and services that can quickly run into thousands of dollars. You and your already busy, overburdened staff will be forced to take time to respond. You will be questioned and investigated and will likely want to retain the services of an attorney to represent you or negotiate with the hackers. None of this will be cheap and it will have a lasting, negative effect on your business.

To Reserve Your **FREE** IT Security Assessment,
please visit www.ItConInc.com
or call our office at 845.738.1661

3. Cost After Cost:

According to Cyber Security Magazine, 61% of all SMBs have reported at least one cyberattack during the previous year. So, WHEN your organization gets hacked (not IF), this giant, expensive, reputation-destroying nightmare will land squarely on YOUR shoulders.

But it doesn't end there...

Depending on the data you host, you may even be investigated and questioned by authorities and clients alike about what you did to prevent this from happening. If you have not implemented the protections we are outlining in this report, you can be found negligent and may be facing fines and lawsuits. Claiming ignorance is not an acceptable defense.

If the breach becomes public, your competition will have a heyday over this. Clients will be IRATE and will take their business elsewhere. Morale will tank and employees may even blame YOU. Your bank is NOT required to replace funds stolen due to cybercrime (go ask them), and unless you have a very specific type of insurance policy for these matters, any financial losses will be denied coverage by your general business liability insurance.

You will be labeled “stupid and irresponsible” by others who are impacted by the breach, such as clients, vendors, government officials, competitors and possibly even some of your employees.

You might think this is crazy, or that it won't happen to you. But it IS happening in record numbers to millions of organizations, large and small. The FCC reported that theft of digital information has become the most commonly reported fraud, surpassing physical theft. Costs and losses from cyberattacks are rising due to extended downtime and the sophistication of attacks. And now the Russia-Ukraine war is creating great concern over Russian hackers taking aim at Americans in retaliation for tough sanctions put in place.

Please do NOT underestimate the importance and likelihood of these threats.

According to the IBM Cost Of Data Breach Report, the cost for lost or stolen records is between \$150 to \$225 per record compromised, after factoring in IT recovery costs, lost revenue, downtime, fines, legal fees, etc. How much sensitive data do you have? How many employees? Multiply the number of clients you support, and the number of employees' data you have by \$150 on the conservative side, and you'll start to get a sense of the costs to your business.

Costs Not Considered

Here are just a few of the costs you might not have considered:

- ❑ Paying the ransom to get your data back. According to Palo Alto Network, the average ransomware payment is just north of \$920,000 nowadays.
- ❑ Credit and ID theft monitoring for EVERY person impacted, at a cost of \$10 to \$30 per record.
- ❑ Costs of your staff having to deal with a tsunami of paperwork, phone calls, tasks and projects to clean this mess up and deal with the recovery, which takes them away from the productive work you hired them to do.
- ❑ The fees and IT costs to remediate all of your insurance company's forensic findings and re-establishing working agreements within your supply chain.
- ❑ If the breach involves a computer that transmits or hosts credit card data:
 - ❑ Fees of \$500,000 per incident for being PCI non-compliant
 - ❑ Increased audit requirements
 - ❑ Potentially increased credit card processing fees
 - ❑ Potential for a company-wide shutdown of credit card activity by your merchant bank, requiring you to find another processor

In A World Full Of Marketing Promises, How Do You Know Your Current IT Company Is ACTUALLY Doing A Great Job?

It's very possible that you are being ill-advised by your current IT company. What have they recently told you about the new threats emerging over the last 3 to 6 months? Are they meeting with you on a quarterly basis to go over a recent third-party analysis of your environment to ensure you are still secure? Situations can change in an instant – if they are not truly monitoring your environment daily, scanning quarterly and in constant communication with you (or a key person on your staff) about security, they are NOT doing their job.

There could be several reasons for their failing you.

To Reserve Your **FREE** IT Security Assessment,
please visit www.ItConInc.com
or call our office at 845.738.1661

IT Company Doing Their Job?

First, and most common, they might not know HOW to advise you, or even that they should. Many IT companies know how to keep a computer network running **but are completely out of their league when it comes to dealing with the advanced cybersecurity threats we are seeing today**. Many of these IT firms will tell you to your face that they are doing everything to protect you, but upon simple inspection, they prove grossly negligent in making sure your (let alone their) systems are secure and able to withstand current cyber threats.

That doesn't stop them from selling you IT services. They might even tell you they're keeping you secure, but when you get breached, they'll point the finger at you saying YOU didn't want to spend the money on security, and they didn't warranty that you wouldn't get a breach or that they were keeping you compliant, leaving you to completely handle this on your own and carry the damages and cost.

Here's a test: E-mail them and ask them, point-blank, "Can you assure me you are doing everything we need to ensure we're secure?" If they say yes, ask them to demonstrate it. You might find out that their story falls apart like a cheap suit. NOBODY (particularly IT guys) likes to admit they are out of their depth. They feel compelled to exaggerate their ability to avoid being fired and replaced – but it falls upon YOU to make sure you have the RIGHT company doing the RIGHT things.

Second, they may be "too busy" themselves or not have sufficient staff to truly be proactive with your account – which means they aren't doing the ongoing work that needs to be done (and they might still be charging you as if they were).

Third, they might just be cheap and unwilling to make the significant investment in the tools, people and training they need. Maybe they don't want to admit the service package they sold you has become OUTDATED and inadequate. Their cheapness CAN be your demise.

Is Your Current IT Company Doing Their Job?

Take The Quiz On The Following Page To Find Out.

If your current IT company does not score a "Yes" on every point, they are NOT adequately protecting you. Don't let them "convince" you otherwise and DO NOT give them a free pass on any one of these critical points. Remember, it's YOUR business, income and reputation on the line.

That's why it's important to get verification on the items listed. Simply asking, "Do you have insurance to cover our company if you make a mistake?" is good but getting a copy of the policy or other verification is critical. When push comes to shove, they can deny everything.

To Reserve Your **FREE** IT Security Assessment,
please visit www.ItConInc.com
or call our office at 845.738.1661

Is Your Current IT Company Doing Their Job?

- ❑ **Have they met with you recently – in the last three months – to specifically review and discuss what they are doing NOW to protect you?** Have they told you about new and inexpensive tools such as two-factor authentication or advanced endpoint security to protect you from attacks that antivirus is unable to detect and prevent? If you are outsourcing your IT support, they should, at a MINIMUM, provide you with a quarterly review and report of what they've done – and are doing – to protect you AND to discuss new threats and areas you will need to address.
- ❑ **Do they proactively monitor, patch and update your computer network's critical security settings daily? Weekly? At all? Are they reviewing your firewall's event logs for suspicious activity?** How do you know for sure? Are they providing ANY kind of verification to you or your team?
- ❑ **Have they ever asked to see your cyber liability insurance policy?** Have they verified they are doing everything your policy REQUIRES to avoid having a claim denied in the event of a cyberattack? Insurance companies don't make money paying claims; if you are breached, there will be an investigation to prove you weren't negligent and that you were actually doing the things you've outlined in your policy.
- ❑ **Do THEY have adequate insurance to cover YOU if they make a mistake and your business is compromised?** Do you have a copy of THEIR CURRENT policy? Does it specifically cover YOU for losses and damages? Does it name you as a client?
- ❑ **Have you been fully and frankly briefed on what to do IF you get compromised?** Have they provided you with a response plan? If not, WHY?
- ❑ **Have they told you if they are outsourcing your support to a third-party organization? DO YOU KNOW WHO HAS ACCESS TO YOUR BUSINESS AND THE DATA IT HOLDS?** If they are outsourcing, have they shown you what security controls they have in place to ensure that a rogue technician, living in another country, would be prevented from using their free and full access to your network to do harm?
- ❑ **Have they provided you evidence that they have a third-party that audits their network?** Did you know that if their network gets hacked, the hackers will have access to your network too? If you haven't seen evidence of their third-party audits, request it immediately.
- ❑ **Have they kept their technicians trained on new cybersecurity threats and technologies, rather than just winging it?** If they don't have a way to show you that their team is learning about threats hitting your industry and to validate that their team is up-to-date on current security protocols, how can they guarantee providing you with secure solutions?

Quiz

- ❑ **Do they have a ransomware-proof backup system in place?** One of the reasons the WannaCry virus was so devastating was because it was designed to find, corrupt and lock BACKUP files as well. ASK THEM TO VERIFY THIS. You might *think* you have it because that's what your IT vendor is telling you.
- ❑ **Do they have controls in place to force your employees to use strong passwords?** Do they require a PASSWORD management system to prevent employees from using weak passwords? If an employee is fired or quits, do they have a process in place to make sure ALL passwords are changed? Can you see it?
- ❑ **Have they talked to you about replacing your old antivirus with advanced endpoint security?** Anti-virus tools from two or three years ago are useless against today's threats. If that's what they have protecting you, it's urgent you get it resolved ASAP.
- ❑ **Have they implemented "multifactor authentication," also called 2FA or "two-factor authentication," for access to highly sensitive data?** Do you even know what that is? If not, you don't have it.
- ❑ **Have they implemented web-filtering technology to prevent your employees from going to infected websites, or websites you DON'T want them accessing at work?** I know no one in YOUR office would do this, but why risk it? Adult content is still the #1 thing searched for online. Then there's gambling, shopping, social media and a host of other sites that are portals for hackers. Allowing your employees to use unprotected devices (phones, laptops, tablets) to access these sites is not only a security risk but a distraction where they are wasting time on YOUR payroll, with YOUR company-owned equipment.
- ❑ **Have they given you and your employees ANY kind of cybersecurity awareness training?** This is now required for insurance providers to cover breaches. Employees accidentally clicking on a phishing e-mail or downloading an infected file or malicious application is still the #1 way cybercriminals hack into systems. Training your employees FREQUENTLY is one of the most important protections you can put in place. Seriously.
- ❑ **Have they properly configured your e-mail system to prevent the sending/receiving of confidential or sensitive data?** Properly configured e-mail systems can automatically prevent e-mails containing specified data, like social security numbers, credit cards, and other sensitive data from being sent or received.
- ❑ **Do they allow your employees to connect remotely using GoToMyPC, LogMeIn or TeamViewer?** If they do, this is a sure sign you should be concerned! Remote access should strictly be via a secure VPN (virtual private network).
- ❑ **Have they had a third party analyze your network to validate their work?** You would never attempt to proofread your own work. Why would you expect your IT person to? Many regulatory bodies require at a minimum an annual third-party assessment for this reason.

Security Is NOT Compliance – Make Sure Your IT Company Is Taking These 3 Steps

As previously discussed in this report, a mistake many organizations make is thinking that because they're compliant, they are automatically secure. Sorry. Not so. You can be compliant and completely insecure, but there are three key steps to ensure you are actually secure.

Most IT companies are only doing one or two of the three. You want to make sure they are checking ALL the boxes so if and/or when a breach occurs and you get audited, you are brilliantly prepared, and the damages are minimized.

Here they are in order:

1. A regular third-party security assessment with a remediation plan.

Hackers are constantly coming up with new ways in. Security tools that worked just two years ago are no longer sufficient today. If they aren't having a third-party security assessment performed at least every quarter like clockwork, they are missing gaping holes that are actively being exploited by hackers. Problem is, this is where most businesses stop and don't go on to Steps 2 and 3 below.

2. Full and true IMPLEMENTATION of their plan.

Best-laid plans are worthless if not implemented. You can give a patient a treatment plan – but if they refuse to follow it, or skip steps and cherry-pick your advice, they cannot expect to get well.

Same goes for security – your IT consultant should be giving you options, timelines and a weighing of pros and cons for choices you make about how to implement a plan to become compliant based on your risk tolerance, situation, budgets, resources, etc. A good IT company or consultant will guide you through this.

But the most important aspect is to make absolutely certain that the IT team or company you put in charge to implement the remediation plan is actually doing it. Based on our personal experience, 90% of the companies selling outsourced IT services and support are NOT being diligent about the full and complete implementation of a security and compliance plan.

To Reserve Your **FREE** IT Security Assessment,
please visit www.ItConInc.com
or call our office at 845.738.1661

In a world of marketing promises, how do you know your IT and security partner is delivering as promised? Please see the previous section of this report to know if they are truly implementing the plan. Further, we are offering a free, independent Security Assessment to audit your current IT company and tell you the truth about what they are (or aren't) doing for you.

3. Documentation.

This is the part most IT companies and medical practices skip. Behind every security compliance measure is a documentation requirement.

If you have a breach and subsequently get audited, you will be required to produce documentation of your security activities and policies. If you do not have those documents, your business will not be able to sustain a major attack or breach. If you do not have documented plans for how to address a ransomware attack, data breach, or disclosure and clear instructions on who needs to do what when, you are putting yourself and your business at risk of not surviving the consequences.

Will You Wait Until You Actually Have A Breach Or Report Filed Against You Before Doing Something About It?

Over half of all home security systems and cameras are bought (or beefed up) by homeowners after a burglary or home invasion. Across the country, warnings of bad storms drive hordes of people to the store to stock up on water, food and other supplies – and anyone who hesitates or waits to hit the store AFTER work or WHEN they have the time often arrives to find the store shelves empty, and the remaining picked-over supplies at jacked-up prices.

We are strongly cautioning against any assumption that you are truly protected and prepared should a breach occur, or should you get reported for a violation. Fire prevention is infinitely cheaper, less stressful and more orderly than having to call the fire trucks and work the hose when your house is ablaze. Cancer is BEST treated when found EARLY and aggressively treated, not left to get worse until the point of no return.

The time to have an in-depth, fresh look at the state of your security program is right now, with a friend who has your best interests in mind – NOT an insurance agent or an attorney – when there is no crisis happening, no auditors calling, no security breach occurring.

Our Free Preemptive IT Security Analysis Will Reveal If Your Current IT Company Is Doing What They Should

Over the next couple of months, we will be conducting free Security Assessments for medical facilities to find and expose vulnerabilities and failings in your security BEFORE a cyber event happens.

Fresh eyes see things – so the biggest value of our Assessment is getting us to sit on YOUR side of the table and give you straight answers to whether or not your IT company or person is actually doing what they should to minimize your chances of experiencing a breach and minimize the losses that can occur. **You get a “Sherlock Holmes” investigating on your behalf.**

Here’s How It Works: We will conduct a thorough, CONFIDENTIAL investigation of your IT network, backups and security protocols through the lens of not only an IT company, but also from the perspective of a hacker and an insurance provider. Your time investment is minimal: one hour for the initial meeting and one hour in the second meeting to go over our Report Of Findings.

When this Assessment is complete, here are just a few of the most frequently discovered problems we are likely to uncover and the answers we’ll be able to provide you.

- Is your current IT company or team actually implementing critical security protections, protocols and systems that would not only minimize the chances of a breach, but also ensure your insurance claims would not be denied due to not following through on something YOU agreed to do on your insurance policy’s declarations contingent for coverage?
- What are the least expensive, most impactful things you can do to secure your network and avoid getting slapped with “Willful Neglect” should a breach happen?
- Is your security configured well enough that you can pass a simple cybersecurity analysis called a penetration test? We’ll issue one and be able to demonstrate, in a matter of hours, if your IT company is doing their job or completely failing you.

**All of these are tiny “ticking bombs” in your security, waiting to go off at precisely the wrong time.
We urge you to go to the URL below and book your free assessment now!**

When *Others* Audit – Insurance Companies, Government Regulators – There Is No Kindness

Government auditors and insurance providers won't give you the benefit of the doubt. They know what to look for and where the failings typically occur. They are experienced in finding lax protocols and know what stones to turn over.

When such audits reveal problems, there is serious stress and strain placed on your staff and on you personally. Tensions rise, fingers get pointed and resentment can build. Your own preventive, independently conducted, completely confidential compliance assessment is the **ONLY** practical way to prevent embarrassment or, worse, consequences. It's also the smart way to unearth problems you can fix now.

Candidly, no one should proofread their own work – so if you do have an IT company you are paying, this will give you a free, no-risk way to tell for sure if they are doing the job you're paying them to do.

Please...Do NOT Just Shrug This Off (What To Do Now)

If you have scheduled an appointment, you don't have to do anything but be sure to show up, ready with any questions you might have. **If you prefer to talk to us first** call us at 845-738-1661 or send an e-mail to lfreiman@itconinc.com.

I know you are *extremely* busy and there is enormous temptation to discard this, shrug it off, worry about it "later" or dismiss it altogether. That is, undoubtedly, the easy choice...but the easy choice is rarely the **RIGHT** choice.

This I can guarantee: At some point, you will have to deal with a cybersecurity "event," be it an employee mistake, malware infestation or even a ransomware attack.

We want to make sure you are brilliantly prepared for it and experience only a minor inconvenience at most. But if you wait and do nothing and ignore our advice, I can practically guarantee this will be a far more costly, disruptive and devastating disaster.

You've spent a lifetime working hard to get where you are today. Let us help you protect and preserve it.

Dedicated to serving you.

Why ITCON Is Uniquely Qualified To Advise You In This Matter

IT security has brought high-fee “experts” out of the woodwork who are, quite honestly, woefully inexperienced and uninformed. Software and IT companies, medical practice consultants and even insurance agencies see this as their golden opportunity, rushing to present themselves as saviors.

But how do you know someone actually has the depth of experience to handle this hyper critical part of your practice? For 15 years my organization has excelled at cybersecurity for medical practices.

Here are just a few of the things that make us uniquely qualified to handle your IT security needs:

- We service our customers 7 days a week during regular business hours.
- We provide quick responses in times of crisis with a live representative on call 24 hours a day!
- Our support team specializes in managed IT services, Managed Cybersecurity Services, hardware/software support, VOIP services, IT project management. cloud computing and more.
- ItCon is notably affiliated with InfraGard, which is the cybersecurity division of the Federal Bureau of Investigation (FBI). ItCon is also Better Business Bureau accredited and is a proud member of both the U.S. Chamber of Commerce and the New York State Chamber of Commerce.

Here's What Our Clients Have To Say

Personalized IT & Reliable Team!

Before using ItCon we constantly got held up with IT frustrations and had to be constantly involved with the IT of our company. ItCon came in, gave us a detailed plan customized to all our needs and is working together with our in-house IT team to always be up to par. ItCon is true to their word and has great open communication through every step. This makes me feel confident that our IT department is productive and in great hands, which gives me peace of mind. When asked if a company should hire ItCon I have 3 words for them: JUST DO IT!

– **Joseph Deutsch** *CEO, ODA Primary, Health Care Network*

Experienced Significant Growth!

Dealing with constant miscommunication and bad customer service with IT and Security providers kept me busy with my companies' little things instead of our growth. Since we hired ItCon they simply outperform other IT and Security companies across the board. They modified their services to fit our needs and handle our company with transparency and honesty. We experienced significant growth over the past few years and ItCon is always there to provides great advice and will do whatever is necessary to support our continuous growth. In addition to the knowledge and recommendations we need to keep our infrastructure up to date, ItCon provides great service. They are available to handle issues even after hours and on weekends. This is critical to a company like ours that functions around the clock. If you are considering hiring ItCon, "Just do it, you will not regret it."

– **Pinchus Brecher** *ECD, Daas Wellness*

ITCON gives us a true peace of mind!

If you're looking for an exceptional IT support and Cyber security provider, you need to contact ItCon. ItCon's team is full of friendly professionals who take care of all out IT needs in efficient fashion. Obtaining a peace of mind is not an easy task, but ItCon succeeds in giving us just that. Every issue that we encounter is properly recognized, addressed and resolved in a timely manner. Timeliness is crucial to our company's daily responsibilities and ItCon's timeliness is second to none! ItCon is a true FULL SERVICE IT form! Go with ItCon-you wont regret it!

– **Estee Lowy** *COO, Highview National Insurance Company*

ItCon Has Taken The Burden of computer support and maintenance off my back!

Thanks to ItCon and their Business Care program, the entire burden of computer support has been taken off my back, and I don't have to worry about security threats or downtime. Now we are getting regular Microsoft updates, virus updates, spyware is being scanned and removed, the temporary files are getting cleaned up, and our backups are being taken care of. It's really helped speed up our network, our programs run better, and we don't have the recurring problems that we had in the past. Three years ago when we were still with our previous IT company, the executives in our company were misled into thinking that our network is being monitored properly and a simple local backup created should suffice. Until our network was hit by the well-known malware "ransomware". This malware paralyzed our entire operation for 10 full days. Even after we were back up and running, due to the lack of proper backup, our agency lost tremendous amount of data which we were not able to recover. So if anyone thinks that monitoring is really not needed, or backups are not as necessary, I can tell them first hand that sooner or later they will get hit. You have to be able to prevent the disease and have the cure handy as well. It's really rare to find an IT support company that caters to Businesses like ours and get the support they provide. I'm very proud of what we've accomplished here and since ItCon has become part of our team, we have hired and branched out more. If you are considering ItCon just do it, you will not regret it!

– **Rachamim Hakakian** *Director of Operations, Yedei Chesed*
